

EXPERIMENT 17 – Employee Performance Analysis

Question

Analyze employee performance using line chart, department bar chart, and table.

Dataset

Employee ID	Department	Years of Service	Performance Score
1	Sales	5	85
2	HR	3	92
3	Marketing	7	78

The supplied experiment specifies these employee records and asks for performance visualizations.

R Code

```
# Experiment 17 - Employee Performance

employee_id <- c(1, 2, 3)

department <- c("Sales", "HR", "Marketing")

years <- c(5, 3, 7)

performance <- c(85, 92, 78)

data <- data.frame(employee_id,
                    department,
                    years,
                    performance)

# Question 1 - Line Chart

plot(years, performance,
     type = "o",
     pch = 19,
     main = "Employee Performance Trend",
```

```

xlab = "Years of Service",
ylab = "Performance Score")
text(years, performance,
      labels = employee_id,
      pos = 3)
# Question 2 - Department Bar Chart
department_count <- table(department)
barplot(department_count,
        main = "Employees by Department",
        xlab = "Department",
        ylab = "Number of Employees",
        col = "lightgreen")

```

Question 3 - Table

```
print(data)
```

Question 1

Create a line chart to visualize employee performance over years of service.

Output 1

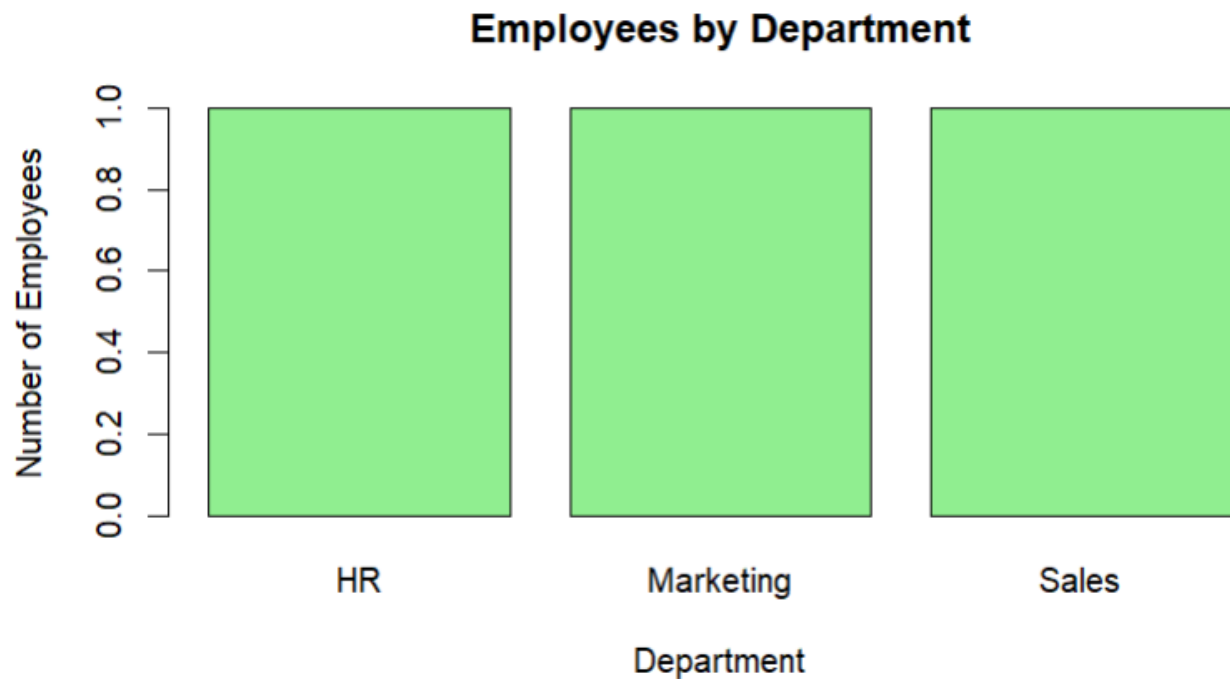

Employee 2 has the highest performance score of 92, while Employee 3 has the lowest score of 78.

Question 2

Generate a bar chart showing employees across departments.

Output 2

Each department has one employee in the supplied dataset.

Question 3

Display employee performance data.

Output 3

```
> # Question 3 - Table
> print(data)
  employee_id department  years  performance
1           1         Sales     5           85
2           2           HR     3           92
3           3    Marketing     7           78
```
